

Name: _____

Shark Teeth

When people go to the beach they like to look for shark teeth that a shark may have shed from its mouth. Some sharks can shed up to 30,000 teeth in a lifetime! They lose hundreds of teeth a year. Great white sharks have the largest teeth of the shark family. The great white has teeth that are 4 centimeters in length.

The best beaches to find shark teeth are in Georgia and Florida. Walk on the beach at low tide and look for black triangles, these are the shark teeth. Look carefully and you might get lucky and find one of these neat fossils. ASH©2015

1. Remembering: Main Idea

Who? _____ → _____
What? _____ → _____
Why? _____ → _____

2. Understanding: Details

Write 3 sentences about what you remember or learned.

3. Applying

Why do you think more shark teeth are found in Georgia and Florida?
