

Name: _____

Dinosaur

The Tyrannosaurus Rex was a dinosaur that lived long ago. It was up to forty feet in length and it walked on two legs, balanced by its massive tail. Even though its fore limbs appeared small, they were very powerful for their size and had long claws. The T-Rex had very good eye sight. A tooth was found from a T-Rex that was 12 inches long, that's a big tooth! Some scientists believe that the Tyrannosaurus Rex had feathers and scales on its body. Because the only parts of the T-Rex that remain are fossilized, it is hard to know exactly what it looked like when alive.

1. Remembering: Main Idea

Who? _____ → _____
What? _____ → _____
Why? _____ → _____

2. Understanding: Details

Write 3 sentences about what you remember or learned.

3. Applying

Why do you think the size of the Tyrannosaurus Rex is important to scientists?
